

Input

Mitochondrial genomes,
dense *Homo* and domestic animal mitogenomes

Tiling input

Family representatives,
haplogroup genomes

k-mer generation

Step=1 length=52

Probe generation

Step=5 length=52

Select one high-quality
genome per species

Tiling Probe generation

Step=5 length=52

Specific k-mer identification

Genus-specific k-mers

Species-specific k-mers

Population-specific k-mers

Individual-specific k-mers

k-mer based probe filtering

eProbe filtering

Probe collapsing

Merge & deduplication

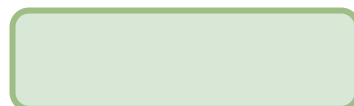

Informative probe set
70,980 sequences

Final probe set
683,196 sequences
